On-site ePRO

Administer ePRO questionnaires on site. On your device, on the participant's device, or remotely. Same visit, same record, no data loss.

Expand your range of data capture

Three ways to administer questionnaires...

On your device

Hand over your device for the participant to use.

On the participant's device

Display a QR code on your device, participants scan and continue on theirs.

Remotely

Automatically get a backup link for the participant to finish up remotely.

Or **switch devices mid-questionnaire** while preserving progress.

Keep it simple for sites

No separate apps

On-site ePRO is an add-on to Castor's regular ePRO application. There's no extra app to deploy, update, or train on.

Hands off participant devices

You set everything up from your device. No participant device handling or awkward hand-offs.

Provisioning optional

You can use the devices you already have. Provisioned hardware is not mandatory.

Capture data without disruption

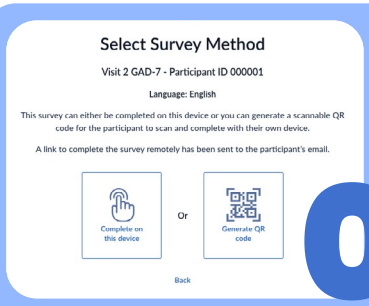

01

Start the on-site ePRO process.

02

Select the right participant, visit, questionnaire, and language; and confirm the participant's identity.

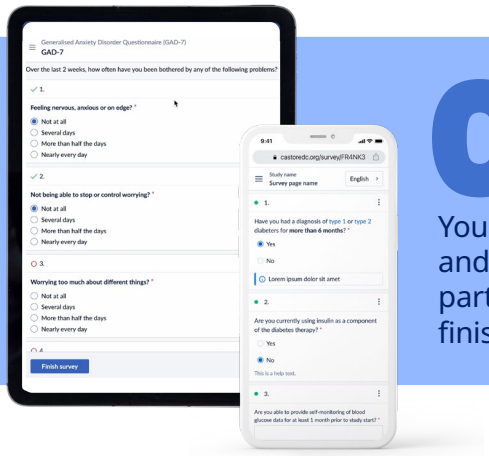

03

Choose to complete the questionnaire on the site's device or generate a QR code for the participant to use their own device.

04

Let the participant fill out the questionnaire.

05

You can switch devices anytime, and a back up link is sent to the participant in case they can't finish now.

Run your ePRO study with Castor

5,200
ePRO studies supported

6- 8 weeks
average deployment time

149M+
datapoints collected from questionnaires
